Double Patenting

The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. A nonstatutory obviousness-type double patenting rejection is appropriate where the conflicting claims are not identical, but at least one examined application claim is not patentably distinct from the reference claim(s) because the examined application claim is either anticipated by, or would have been obvious over, the reference claim(s). See, e.g., *In re Berg*, 140 F.3d 1428, 46 USPQ2d 1226 (Fed. Cir. 1998); *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) or 1.321(d) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent either is shown to be commonly owned with this application, or claims an invention made as a result of activities undertaken within the scope of a joint research agreement.

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

Claims 1-35 are rejected on the ground of nonstatutory obviousness-type double patenting as being unpatentable over claims 1-46 of U.S. Patent No. 6,639,090 (Ramey et al). Although the conflicting claims are not identical, they are not patentably distinct from each other because the powdered overbased amorphous alkaline earth metal salt of a fatty acid (claim 1 of the patent) may be the same as the additive of claims 24 etc. when the amorphous alkaline metal salt is a carbonate which is complexed with a calcium carboxylate of a fatty acid. Claims 8-9 of the patent disclose dispersing the powdered salt in a liquid hydrocarbon oil (lubricant) to form a haze-free liquid. The process of patented claim 37 is the same as instant claim 1 and the product of the patented process contains a hydrocarbon oil (lubricant) as set forth in dependent claim 41.

Art Unit: 1764

Claims 1-23 are rejected on the ground of nonstatutory obviousness-type double patenting as being unpatentable over claims 1-44 of U.S. Patent No. 6,689,893 (Reddy et al) . Although the conflicting claims are not identical, they are not patentably distinct from each other because the process for preparing the shelf stable haze free liquid of an overbased alkaline earth metal salt of a fatty acid may be the same and the product contains up to 35% of a hydrocarbon oil as set forth in dependent claim 24. The hydrocarbon oil is indistinguishable from the lubricating oil of the instant claims.
